Pumps

Diaphragm, Submersible and Barrel

Description

Diaphragm Pumps operate on a simple mechanism involving few moving parts. They are versatile work-horses that can be used in a diverse range of pumping situations across numerous industries. They are efficient and easily serviced. With the proper selection of pump materials they are capable of handling a wide variety of fluids. Apart from pumping regular fluids like water, sea water and most fluids having viscosities like water, some problematic fluids.
